

Why should I get immunized against HPV?

It is estimated that around 75% of sexually active Canadians who have not been immunized against HPV will have an HPV infection at some point in their life.

HPV infections can lead to genital warts, as well as various cancers such as cervical, penile, head, and neck cancers. In fact, almost all cases of cervical cancer worldwide, and up to 70% of new cases of head and neck cancers seen in North America, are due to HPV.

Getting immunized against HPV is the best way to protect against it.

Talk to your doctor, nurse, pharmacist, or local public health office about getting immunized against HPV.
