THE STORY OF INFLUENZA

Influenza is a contagious respiratory illness caused by influenza viruses.

Influenza type A and B cause the majority of influenza illness in humans

Young children

pregnant women,

most vulnerable

Indigenous peoples,

age, and people with

medical conditions are

adults >65 years of

<59 months of age,

F S b S

Healthy people can spread influenza before showing any signs of illness Transmission occurs through close contact with others and contact with contaminated surfaces

Symptoms are often confused with influenza-like illnesses like the common cold

Complications such as pneumonia may lead to hospitalization or even death

An average **12,200** hospitalizations and approximately

deaths are attributed to influenza annually in Canada

The National Advisory Committee on Immunization (NACI) recommends all Canadians 6 months of age and older be immunized against influenza.

- New strains of influenza appear every year. This is why immunization is required annually.
- Influenza vaccines CANNOT give you influenza.
- Influenza vaccines are SAFE and REDUCE the spread of influenza viruses.

Talk to your doctor, nurse, pharmacist or local public health office about getting immunized against influenza.
