

HPV Immunization

Do it to protect yourself.

WHAT IS HPV?

Human papillomavirus (HPV) is one of the most common sexually transmitted infections (STIs) in Canada. HPV infection occurs in approximately 75% of sexually active Canadians. Most individuals don't show any signs or symptoms and can pass the virus on to others without even knowing it.

HPV PREVENTION

The most effective way to prevent HPV infection and HPV-related complications is to get immunized.

ARE YOU PROTECTED AGAINST HPV?

Publicly-funded immunization schedules for HPV may vary between provinces and territories. Talk to your doctor, nurse, pharmacist, or public health office about HPV immunization.
